

AMENDMENTS TO THE SPECIFICATION

Please replace Paragraph [0079] with the following paragraph rewritten in amendment format:

[0079] In one form of the invention the inclined module 12 and straight module 14, generally of the construction noted, each has five generally equally spaced longitudinal main ribs 92 and 96, respectively, and five generally equally spaced transverse main ribs 94,98, respectively. As noted the longitudinal main ribs 92 and 96 extend for substantially the full length of the ramp modules 12 and 14 while the transverse main ribs 94 and 98 extend for substantially the full width of the ramp modules 12 and 14. In addition, the ~~Inclined~~inclined module 12 has four longitudinal rib segments 93 in between the five longitudinal main ribs 92 and four transverse rib segments 95 in between the five transverse main ribs 94. The rib segments 93 and 95 are also connected to the support surface 16 but do not extend for the full length or full width of the inclined ramp module 12. Similarly, each of the straight ramp modules 14 has four longitudinal rib segments 97 in between the five longitudinal main ribs 96 and four transverse rib segments 99 in between the five transverse main ribs 98. The rib segments 97 and 99 are also connected to the planar support surface 34 but which do not extend for the full length or full width of the straight ramp module 14.
